Q1) If ^{upper limit} NO restriction on Line Size.

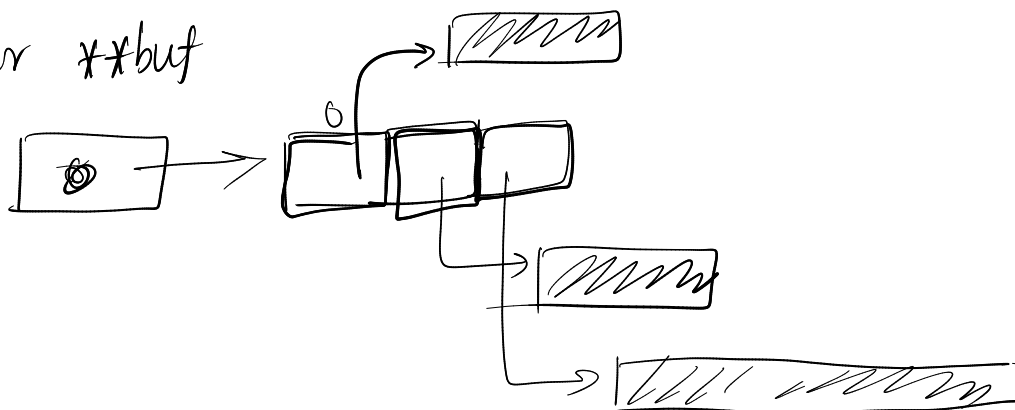

```
char* fgetString(FILE *fp)
{
    char *p = 0; int i = 0;
```

```
do { p = realloc(p, i+1);
      p[i] = fgetc(fp);
    } while (p[i] != '\n');
```

```
while (!feof(fp)) {
```

```
    p[i-1] = '\0';
    return p; }
```

char **buf

Q2. Sortlines of a file as given below.

`/sortlines datafile.txt` should sort all the lines.

`/sortlines [5-10] datafile.txt` should sort line 5 to 10 only.

Q3. Connect the NameDatabase App to file.

fseek()
ftell()
rewind()
feof()
